CODE REVIEW 3

HISTORY

Requires Changes

1 SPECIFICATION REQUIRES CHANGES

Hi, awesome job with your first submission. You are 95% there. Put in a display data function and you are good to go!

We look forward to your next submission! Please keep up the good work and happy learning ahead! Also, remember that your comments and feedback are more than welcome!

Code Quality

✓

All code cells can be run without error.

Well done!

✓

Appropriate data types (e.g. strings, floats) and data structures (e.g. lists, dictionaries) are chosen to carry out the required analysis tasks.

✓

Loops and conditional statements are used to process the data correctly.

✓

Packages are used to carry out advanced tasks.

Great use of pandas!

✓

Functions are used to reduce repetitive code.

✓

Docstrings, comments, and variable names enable readability of the code.

The code is well formatted and documented with comments that explain the functionality appropriately

Script and Questions

✓

Raw input is solicited and handled correctly to guide the interactive question-answering experience; no errors are thrown when unexpected input is entered.

Both expected inputs and unexpected inputs are properly handled.

🔄

Descriptive statistics are correctly computed and used to answer the questions posed about the data. Raw data is displayed upon request by the user in this manner: Script should prompt the user if they want to see 5 lines of raw data, display that data if the answer is 'yes', and continue these prompts and displays until the user says 'no'.

Currently you are missing a display data function:

Displays five lines of raw data `if` the user specifies that they would like to.
After displaying five lines, ask the user `if` they would like to see five more,
continuing asking `until` they say stop.
